

235. – The Quoll (*Dasyuridae*) (Artwork by Cathy James) AWD (Artists with Disabilities).

1. The Quoll is an apex small-predator archetype within the *Dasyuridae* Kind.
2. Anatomy is engineered for high-agility hunting and nocturnal navigation.
3. The skeletal frame demonstrates specialized cranial morphology for predatory efficiency.
4. The Quoll utilizes advanced, reflexive muscular response systems for rapid capture.
5. Reproductive biological design ensures offspring survival in varied, rugged environments.
6. The metabolic rate is calibrated for bursts of high-intensity activity.
7. The Kind exhibits bounded variation in size, from the Tiger Quoll to smaller varieties.
8. Coat patterning serves a dual purpose of environmental camouflage and species identification.

9. Sensory organs (vibrissae) are fine-tuned for subterranean and terrestrial awareness.
10. The dental structure is specifically optimized for carnivorous dietary requirements.
11. The Kind possesses a unique balance of arboreal and terrestrial locomotion capabilities.
12. Forelimb musculature is built for exceptional grip and exploratory digging.
13. The digestive system is highly efficient at processing protein-dense food sources.
14. The Quoll acts as a primary control factor for prey population density.
15. Environmental adaptability confirms the "Type Set" of the *Dasyuridae* Kind.
16. The Quoll demonstrates advanced social and territorial behavior protocols.
17. The auditory systems are designed to detect low-frequency movement in dense foliage.
18. The Kind is not an evolutionary transition; it is a stable, purposeful design.
19. Forensic analysis of the Quoll confirms it has remained a distinct Kind through history.
20. Its habitat range across Australia and New Guinea highlights inherent flexibility.
21. The Quoll's nocturnal activity is a byproduct of efficient ocular biological design.
22. Genetic markers remain stable, preventing "bleeding" into other marsupial Kinds.
23. The Quoll serves as a clear witness to the beauty of the original Blueprint.
24. Interactions with the environment indicate intelligence and intentional survival strategies.
25. The Quoll is fit-for-purpose and stands as a complete, complex biological Kind.
